How to read this whitepaper
1. We submitted what we learned from 20+ implementations, as an assignment.
2. The webinar room marked it. Their questions are the comments.
3. You give the final mark.

The business outcomes of AI marking and feedback

3 Your mark

Grading Feedback

1

Consistency
60%

9/20 essays ranked both best and worst by experienced examiners
Answered on page 2 →

0 AI grades shown, and every paper still checked
Answered on page 4 →

Efficiency
40%

−85% time spent typing feedback, up to 20 min per assignment
Page 5 →

97% of lecturers still add their own word to the AI draft
Answered on page 6 →

2 What the room asked
9

Q Webinar attendee
“Should we have started this conversation by defining consistency?”
Answered on page 2 →

Q Webinar attendee
“Is it better and more accurate than Excel?”
Answered on page 4 →

Q Webinar attendee
“Our students have explicitly said they don't want AI involved in marking and feedback.”
Answered on page 6 →

Criterion · Consistency

Every paper read. No AI grade shown.

In short: the check flags marks that don't fit the paper, so moderation looks at 3 flags instead of a random 10.

Placeholder text. The check compares the mark with the paper, not marks with marks.[1] The rest of this paragraph comes later.

Submission	Your mark	AI grade	Consistency signal
#1042	65	Hidden	–
#1043	58	Hidden	–
#1044	72	Hidden	–
#1045	41	Hidden	▲ Outside expected range
#1046	67	Hidden	–

Illustrative screen, fictional data.

Excel
Compares marks with marks.

Consistency check
Compares the mark with the paper.

Comments on this page 3

Q The room asked

"Is AI needed to find the grades outside the expected range? Is it better than Excel?"

E Eduface

Placeholder reply. One or two lines, no more.

Auto-generated Comment 1

200 / 200

Placeholder. Papers read by the check, against 10 in a moderation sample.

Approve Edit

Q The room asked

"Could we trust the statistical probability of an AI model?"
