Eduface | Jisc

IN CONVERSATION

Hannah Lawrence

Licence Manager, Jisc

What does the sector expect from AI feedback,
and what is actually working?

Eduface | Jisc

What do you see institutions struggling with most right now when it comes to AI?

What made Jisc decide to start the AI in marking and feedback pilot?

CONTEXT

38

colleges and universities in Jisc's AI in marking and feedback pilot

September 2025 to August 2026

> These tools shouldn't be used as a final marker. Humans should always be reviewing the feedback.
>
> **Tom Moule, Jisc**

Jisc National Centre for AI, May 2026 · Times Higher Education, 27 March 2026

Eduface | Jisc

The pilot points towards formative feedback. What makes AI so valuable there?

Where do institutions tend to get stuck when they try it?

What's one piece of advice you'd give an institution starting next term?

WHAT WE LEARNED

Lessons from 20+ pilots and implementations

pilots & implementations

Eduface | Jisc

This is not a product demo.
These are the patterns we saw.

Eduface | Jisc

WHY INSTITUTIONS BRING US IN

Three reasons

1

Data risk

Staff already use AI to mark, outside policy

2

Consistency

Grading and feedback, formative and summative

3

Efficiency

Time back for lecturers

1 · DATA RISK

Staff already use AI, outside policy

When it reaches the press,
it is no longer an IT issue.

THE GUARDIAN · 20 NOVEMBER 2025

'We could have asked ChatGPT': students fight back over course taught by AI

University of Staffordshire

OMROEP BRABANT (NL) · EARLY 2026

Docent bouwt AI-tool die studentgegevens naar ChatGPT stuurt

Lecturer builds AI tool that sends student data to ChatGPT

theguardian.com/education/2025/nov/20 · omroepbrabant.nl/nieuws/6002910

Banning it doesn't stop it.
A safe alternative does.

Eduface | Jisc

01

Consistency

Grading and feedback, formative and summative

Eduface | Jisc

CONSISTENCY

Consistency is more than the same grade

What most people check

1 Same mark

Run the same assignment twice, get the same grade

What we also check

2 Same focus

The feedback addresses the same parts of the work

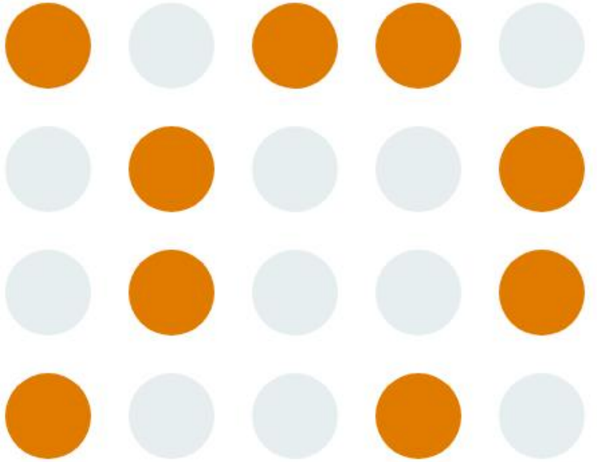

3 Same style

The feedback is written the same way, every time

THE PROBLEM IS OLD

9 of 20

assignments were ranked both best and worst by different experienced examiners

Same work, opposite rankings

Bloxham et al., Assessment & Evaluation in Higher Education, 2016 · 24 examiners, 20 UK universities

CONSISTENCY

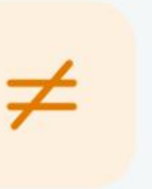

Where inconsistency hurts

Many markers, one module

Paper 80 is marked differently from paper 5

Students compare, then appeal

Moderation only sees a sample

WHY IT MATTERS TO US

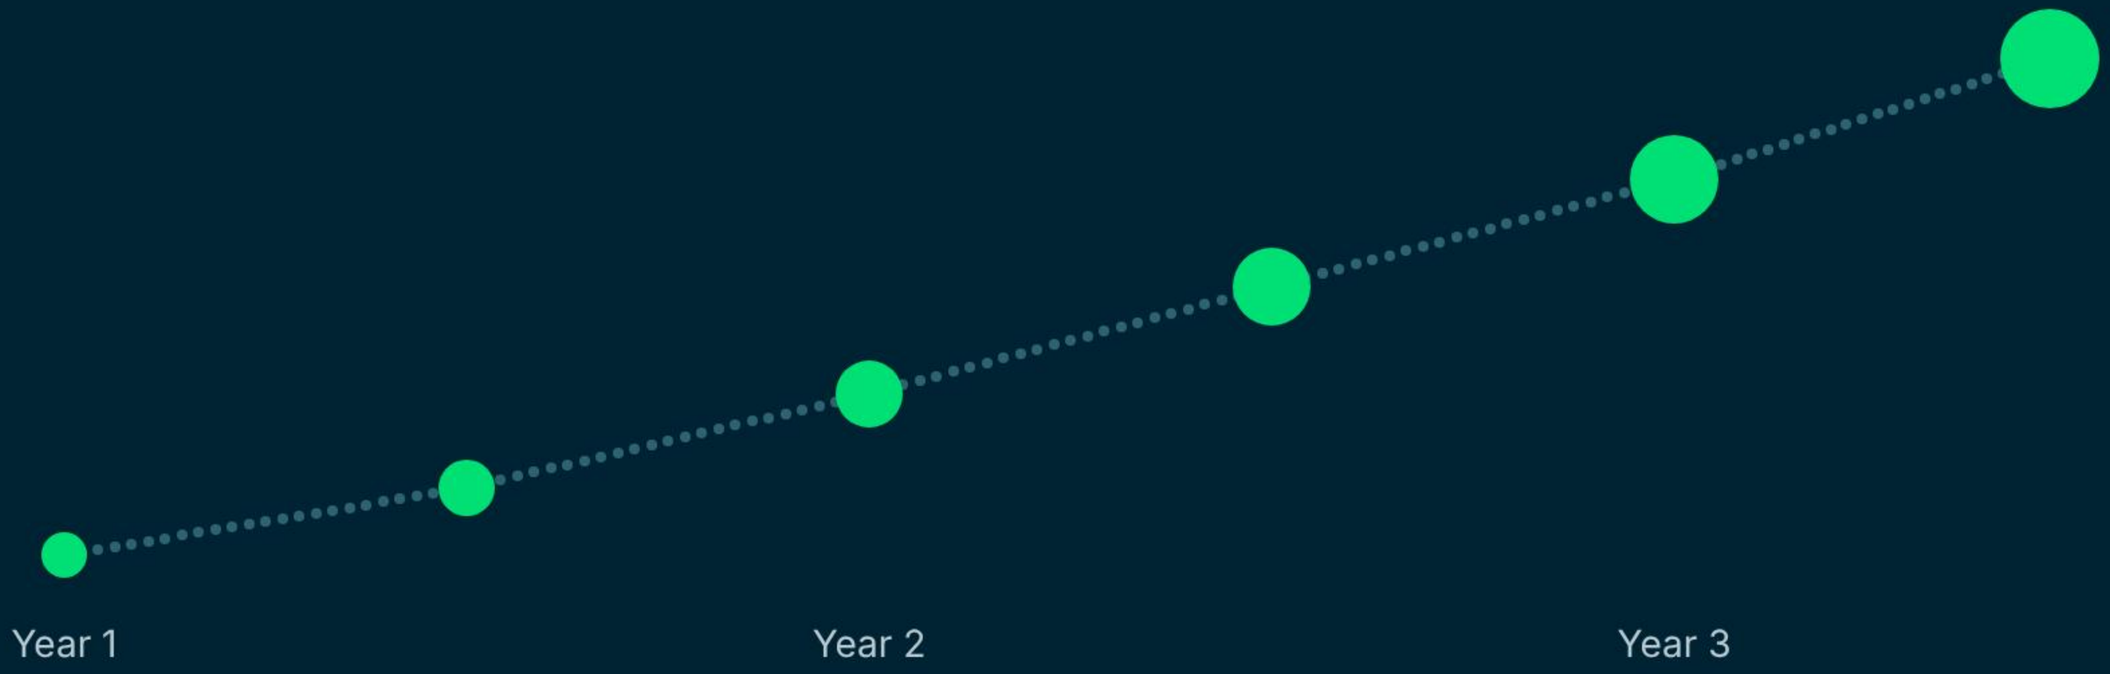

Consistent feedback can build on itself

Eduface | Jisc

WHERE WE WANT TO GET TO

A student sees their own growth across the degree

Illustration

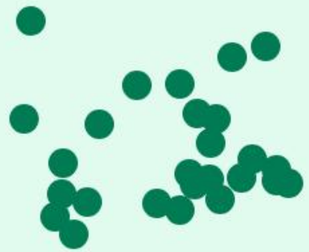

Eduface | Jisc

OUR LESSON

We started with general LLMs. Then we built our own model.

General LLM

Same paper, different focus each run

Purpose-built model

Same paper, same criteria, same voice

Illustration, not a measurement. Model trained on 250,000 education-specific feedback examples.

WHAT INSTITUTIONS LEARNED

Two lessons on consistency

The gap was in the rubric, not in the markers

Six markers, one module. One marked “critical analysis” lower every time: they read the descriptor differently.

Students act on feedback they recognise

Three formative rounds, a different focus each time: students ignored it. Same criteria every round: they used it.

Typical scenarios from our implementations, institutions not named.

Eduface | Jisc

“AI grading isn’t aligned with our policy.”

An objection we hear often.

WHEN AI GRADING IS A STEP TOO FAR

Not ready for AI grades? Use it to moderate.

AI grade stays hidden. Only large deviations reach the moderator.

Eduface | Jisc

02

Operational efficiency

Time saved on marking and feedback

Eduface | Jisc

EFFICIENCY

Two flavours

Formative

03:00

Student asks for feedback
when it suits them

No human in the loop

Summative

Lecturer + AI

Time saved on writing,
not on reading

Human in the loop

Eduface | Jisc

WHAT WE HEAR FROM INSTITUTIONS

The cost of no time

FOR LECTURERS

- Marking instead of mentoring
- Structural overtime

FOR INSTITUTIONS

- No formative feedback at all
- Paying external markers
- Fewer staff, more students

OUR LESSON

Editing AI feedback can cost more time than writing it yourself

Illustration of time per assignment, not a measurement.

Eduface | Jisc

THEREFORE

Accuracy is the most important factor

Your rubric and instructions

→

The model follows them

→

Feedback you would give

→

Approve, don't rewrite

Eduface | Jisc

OUR LESSONS

Tuning is the investment

94%

accuracy on average

98%

accuracy for lecturers who tuned the model

−85%

time spent typing feedback, up to 20 min per assignment

Accuracy: Bath Spa pilot, June 2026 (435 submissions, 13 markers). Typing time: Eduface implementations.

Eduface | Jisc

WHERE WE WANT TO GET TO

Lecturer time moves from typing to teaching

Illustration, not a measurement.

Eduface | Jisc

“Won’t lecturers just click approve?”

The question we always get.

OUR ANSWER

Approving is still judging

The alternative today is often no feedback at all

It gives the feedback the lecturer set up

Every edit is logged in the audit trail

The AI assists. The academic decides.
