Rubric clinical rotation reflection

Criterion	Pass	Fail
Description	Factual, chronological description with the clinically relevant data and times.	Incomplete or lacking the data needed to assess the actions taken.
Critical evaluation of own actions	Actions are tested against guidelines and priorities in acute care, such as an ECG within ten minutes for chest pain.	The student overlooks important shortcomings in their own actions or presents them as strengths.
Analysis	Reasons for the actions are explained using the literature or insights into clinical reasoning.	Analysis remains superficial or unsupported.
Professional role	The student reflects on their own role and authority as a medical student, including supervision.	The action plan or reflection ignores the limits of the student's role.
Action plan	Concrete, feasible and aimed at the real learning points from this case.	The action plan focuses on side issues or does not follow from the evaluation.
